1.0 SCOPE

This document shall be used to obtain materials ratings for selection and reporting material usages to NASA in accordance with applicable Data Requirements specified in MSFC-STD-506, JSC SER-0006 and JSC 30233 or other contract requirements.

This document contains the NASA materials ratings for Flammability, Toxicity, Thermal Vacuum Stability, Age Life, Oxygen Compatibility, Fluid Compatibility, Stress Corrosion, Corrosion and a Foreign Alloy Cross Reference. However, the Design Agency is responsible to assure that all materials and processes used in the design and fabrication of space systems hardware shall be selected by considering the operational requirements for the particular application and the design engineering properties of the candidate materials.

The Materials listed in this document be used for all material selections in both the as-designed and as-built configurations. The suitability of a material is dependent on its specific application. Therefore, the ratings listed herein do not constitute acceptance or rejection of specific material applications. Additional rationale/test data, etc., may be required for some material applications. This additional information must be submitted in the manner specified in the contract.

If materials or Standard/Commercial Parts are used that are not listed in Tables 1, 2, or 3 of this document, the cognizant NASA materials and process organization must be contacted to determine procedures and information required for addition of an item to list. See 8.0 for additional information.

Table 1 lists metals by material designation with Material Code, Material Specification and/or Manufacturers. Materials are rated per NHB 8060.1B, MSFC-SPEC-522, MSFC-SPEC-250 as applicable for the following:

a. Corrosion (CORR)

b. Stress Corrosion Cracking (SCC)

c. Gaseous Oxygen Compatibility (GOX)

d. Liquid Oxygen Compatibility (LOX)

e. Nitrogen Tetroxide Compatibility (N_2O_4)

f. Hydrazine Compatibility (HDZE)

Information Handling Services, 2000

g. Low Pressure Hydrogen (LOH) < 450 psia

h. High Pressure Hydrogen (HIH) > 450 psia

Table 2 lists nonmetals by material designation. Also included are modified listings by specification and manufacturer. Materials are rated per NHB 8060.1 and/or SP-R-0022 as applicable for the following:

a. Flammability (FLAM)

b. Toxicity (TOX)

c. Thermal Vacuum Stability (TVS)

d. Liquid Oxygen (LOX)

e. High Pressure Gaseous Oxygen (HGOX) > 25 psia

f. Nitrogen Tetroxide Compatibility (N_2O_4)

g. Hydrazine Compatibility (HDZE)

h. Liquid Hydrogen (LH2)

i. Hydraulic Fluid Compatibility (HYD)

1.1 ACCESSING AND USE OF MAPTIS COMPUTERIZED DATA BASE

NOTE: The tables listed herein are part of the Materials and Processes Technical Information System (MAPTIS). Data on the Maptis System is available on floppy disks for IBM PCS. The ORACLE Data Base Mangement System must be obtained to use disk data. The use of MAPTIS System, allows string or phrase search. For example, if information regarding 'STYCAST 2850GT' is desired, the following search methology would yield required information.

'STYCAST' - You would find all designations that have STYCAST
'2850' - You would find all designations that have 2850
'2850GT' - You would find all designations that have 2850GT
'ADHESIVE' - You would find all adhesives

Detail procedures for accessing and searching MAPTIS are included in Appendix 1.

Note: Please contact C. F. Key FTS 824-2487 or commerical 205-544-2487 regarding any problem in Accessing Data Base.

Information Handling Services, 2000

1.1.1 DATA SOURCES AND TEST NUMBER PREFIXES

The data listed herein and in the Materials and Processes Technical Information System (MAPTIS) is a variety of organization. Prefix or Test numbers Inentifies these organizations as follows:

W - White Sands Test Facility (JSC)
M - Marshall Space Flight Center
FA, WDC, Philco - Ford Aerospace
G - Goddard Space Center
JPL - Jet Propulsion Laboratory
ESA,I,FC,B,ES,E - European Space Organization
SRI - Stanford Research Institution
HAC - Hughes Aircraft
R - Rockedyne

1.1.2 MATERIAL RATINGS

The material ratings listed herein are the product of an evaluation of all available test data. The rating definitions have been assigned to accurately describe all the test data. Modifications or rating changes should not change the status of materials approved by MUA or Material Lists. The new ratings should be used for all submittals after September 1988.

1.2 METALLIC MATERIALS GENERAL

Metallic materials used in the design and fabrication of space systems hardware shall be selected by considering the operational requirements for the particular application and the design engineering properties of the candidate materials. Materials are rated based on the specific criteria defined herein. Ratings are listed in Table 1 of this document. Generally, in the area of compatibility with liquid and gaseous oxygen, liquid and gaseous hydrogen, hydrazine and nitrogen, tetroxide, temper or condition is not a factor. Also, in the area of compatiblity with liquid and gaseous oxygen, if pressure is not noted, ambient pressure must be assumed.

The minimum information contained in Table 1 is as follows:

1. Material Code Index (Index Number)
2. Alloy
3. Heat Treatment
4. Generic Identification and Form
5. Material Specifications

Information Handling Services, 2000

6. Material Ratings for:

- o Corrosion (CORR)
- o Stress Corrosion Cracking (SCC)
- o Fluid Systems Compatibility
  - Gaseous Oxygen (GOX)
  - Liquid Oxygen (LOX)
  - Nitrogen Tetroxide (N_2O_4)
  - Hydrazine (HDZE)
  - LO PRESS, Hydrogen (< 450 psi)
  - HI PRESS, Hydrogen (> 450 psi)

1.2.1 NICKEL PLATING

Nickel plating shall conform to Specification QQ-N-290 (electrodeposited) or Specification MIL-C-26074 (electroless). Nickel plating should be used when the plated surfaces may be subjected to temperatures up to 1,000 'F, or when a highly corrosion resistance-surface is required. Electroless nickel is particularly adaptable on irregularly shaped parts when a uniform thickness plate is required. When a very hard nickel plating (up to Rockwell C-38) is required, Type II, Specification MIL-C-26074 (heat treated) electroless nickel should be specified. Except as otherwise approved by the procuring activity, the following minimum thickness of nickel plating shall be applied when the plating is to provide protection from corrosion.

a. Surfaces with roughness-height-rating (rhr) not greater than 32 rhr -- 0.001 inch thick (minimum).

b. Surfaces rougher than 32 rhr but not rougher than 125 rhr -- 0.0015 inch (minimum).

c. If it is considered necessary to plate surfaces exceeding 125 rhr, special precautions shall be taken to insure that the plating is free of voids or porosity that will reduce the protective effectiveness of the plating. When nickel is plated on steel heat treated from 160,000 to 180,000 psi (Rockwell C-35 to C-40), the plated part shall be baked at 400 °F + _ 25 for a minimum of 23 hours. Nickel plating on steel heat treated to 180,000 psi or above shall conform to the requirements of MIL-STD-868.

Information Handling Services, 2000

1.2.2 RATING CRITERIA

The criteria for rating metallic materials are as follows:

1.2.2.1 CORROSION RESISTANCE

Materials are rated "A" if they meet the requirements of MSFC-SPEC-250, Class II, and do not require a coating for their intended service. A "B" rating is given to those which meet this requirement, if coated. Materials rated "U" have not been tested and require verification testing prior to use and material rated "X" fails the requirements and should not be used without an approved MUA.

Materials rated other than "A" require specific corrosion protection for each application. The required protection shall be specified by the design organization and approved by the cognizant M&P organization. However, there are certain restrictions on the use of cadmium and similar coatings. The ratings given in the document for cadmium plated fasteners/steel alloys are for general corrosion only. The use of cadmium plated steels for use in sea coast/seawater environments must be avoided and is not allowed until an MUA is submitted and approved. When faying surfaces, fasteners, metals and alloys of aluminum, steel and other metals subject to sea water exposure, MSFC Drawings 10A00526, 10A00527 and 10A00528 should be consulted.

The following general information applies to cadmium plating:

a. Cadmium plating shall conform to Specification QQ-P-416. Type II, Class 2 shall be the preferred protective plating method for general applications. Type II, Class 3 should be used on close tolerance threaded parts when a minimum torquing resistance is required. The usage of cadmium plating shall be subject to the restrictions:

b. Cadmium plating shall not be used for application where the plated surfaces will be exposed to temperatures greater than 100 C. or greater.

c. Cadmium plating shall not be used where a hard or highly abrasion resistance surface is required.

d. Cadmium plating shall not be used for parts of hydraulic equipment which may be in contact with hydraulic fluids and fuels.

Information Handling Services, 2000

e. Cadmium is corroded by vapors of some organic materials and should not be used in confined areas where prolonged exposure to organic materials is possible.

f. Cadmium plating shall not be used in titanium or parts that will be in direct contact with titanium.

g. When cadmium is plated on steel heat treated 160,000 to 180,000 pounds per square inch (psi) (Rockwell C-35 to C-40) the plated part shall be baked at 375 + 25 °F for a minimum of 3 hours. Cadmium plating on steel heat treated from 180,000 to 220 psi (Rockwell C-40 to C-48) shall be baked at 375 + 25 °F for a minimum of 23 hours.

h. For cadmium plating of steel exceeding 220,000 PSI (Rockwell C-40) use vapor plating process conforming to Specification MIL-C-8837 or electroplating in accordance with Standard MIL-STD-870 when approved by procuring activity.

1.2.2.2 STRESS CORROSION CRACKING SUSCEPTIBILITY

Materials are rated "A" if they are listed in Table 1 of MSFC-SPEC-522 as having high resistance to stress corrosion. Some materials not listed in Table 1 of MSFC-SPEC-522 have been rated as "A" if evaluation of test data and/or similarity information have shown that the materials have high resistance to stress corrosion cracking. MSFC-SPEC-522 should be reviewed for more detailed instructions on stress corrosion cracking.

Materials on Table 2 of MSFC-SPEC-522 are rated "B", while materials on Table 3 are rated "C".

Materials rated "U" have not been tested and require testing to determine stress corrosion cracking susceptibility.

Materials rated "N" are not applicable to stress corrosion cracking susceptibility are not normally used in design.

Materials rated other than "A" shall be analyzed and verified in accordance with the requirements of MSFC-SPEC-522 (MUA required for "B", "C" and "U" ratings).

Information Handling Services, 2000

1.2.2.3 FLUID SYSTEM COMPATIBILITY NITROGEN TETROXIDE (N_2O_4)

Metallic materials that contact nitrogen tetroxide (N_2O_4) are rated "A", if they meet the following criteria at 360 psi:

a. Stress corrosion cracking does not occur in a time representative of the system operating life at a stress level of 75 percent of tensile yield for aluminum alloys and 95 percent of tensile yield for all other alloys and corrosion rate does not exceed one mil per year per surface.

b. Fluid decomposition is neither catalyzed nor accelerated by the metal.

c. The metal passed the fluid compatibility test of NHB 8060.1 (Test 15).

d. Metallic materials that fail the above are rated "X".

e. Untested materials are rated "U". Insufficient data is rated "I".

1.2.2.4 FLUID SYSTEM COMPATIBILITY - HYDRAZINE

Metallic materials that contact hydrazine are rated "A" if they meet the following criteria:

a. Stress corrosion cracking does not occur in a time representative of the system service life at a stress level of 75 percent of tensile yield for aluminum alloys and 95 percent of tensile yield for all other alloys.

b. Fluid decomposition is neither catalyzed nor accelerated by the metal at specified temperature of 160 F if none specified.

c. Materials that fail the above are rated "X". Untested materials are rated "U". Incomplete data is rated "I".

d. Meets requirements of Test 15 of NHB 8060.1.

NOTE: See NHB 8060.1 for "Single Barrier Failure Analysis".

Information Handling Services, 2000

1.2.2.5 COMPATIBILITY WITH LIQUID AND GASEOUS OXYGEN

Materials are rated based on results of test evaluations specified in NHB 8060.1. See 1.2.2.6 and 1.2.2.7.

1.2.2.6 TEST NO. 13 LIQUID AND GASEOUS OXYGEN MECHANICAL IMPACT

a. A -- Materials rated "A" meet the mechanical impact requirement at the indicated thickness, pressure and temperature with no reaction in 20 impacts, or one reaction out of 60 impacts, at 368 ft-lbs/in ^{2}, 72 ft-lbs or 10 Kgm, and does not require batch testing.

b. B -- Material meets the same requirements as "A" except must be batch tested (i.e., samples must be tested from each batch to insure product quality).

c. C -- Material fails at 72 ft-lbs/in ^{2} but passes at some energy level above 20 ft-lbs/in ^{2} at the test pressure, thickness and temperatures. A "C" rated material must be batch tested at threshold energy level.

d. U -- Untested

e. Z -- One or more reactions was noted at level tested. Materials rated "Z" must be further tested to determine threshold and must be batch tested.

f. X -- Material fails at 102 ft-lbs/in ^{2} (20 ft-lbs).

g. S -- Special test, see test report.

h. I -- Insufficient data

NOTE: Material Usage Agreements are required for all materials NOT rated "A". However a "B" rated material that has been batch tested and passes does not need an MUA. See NHB 8060.1 for "Single Barrier Failure Analysis".

1.2.2.7 TEST NO. 14 GASEOUS OXYGEN PNEUMATIC IMPACT

a. B -- No reactions in 20 rapid pressurization at test pressure and thickness indicated.

b. X -- Material fails the pneumatic surge test at pressure indicated.

Information Handling Services, 2000

c. U -- Untested

d. S -- Special test, see test report.

e. I -- Insufficient data

1.2.2.8 FLUID SYSTEM COMPATIBILITY - LOW PRESSURE GH_2

Metallic materials are rated "A" if there is no more than 20 percent reduction in ductility or strength in 450 psi when compared to the same test while exposed to helium.

1.2.2.9 FLUID SYSTEM COMPATIBILITY - HIGH PRESSURE GH_2

Metallic materials are rated "A" if there is no more than 20 percent reduction in ductility or strength in 5000 psi GH_2 when compared to the same test while exposed to helium.

1.3 NONMETALLIC MATERIALS GENERAL

Nonmetallic materials used in the design and fabrication of space hardware systems shall be selected by considering the operational properties for the candidate materials. Materials are rated based on the specific criteria defined herein. This list serves as a guide for material selections in both the as-designed and as-built configurations.

Minimum information contained in this list consists of:

a. Material Code
b. Material Designation
c. Material Specification and/or Manufacturer
d. Material Thickness
e. Materials are rated for:
   (1) Flammability (FLAM)
   (2) Toxicity/Offgassing (TOX)
   (3) Thermal Vacuum Stability (TVS)
   (4) Age Life (AGE)
   (5) Fluid Systems Compatibility
      (a) Nitrogen Tetroxide (N_2O_4)
      (b) Hydrazine (HDZE)
      (c) Hydraulic Fluid (HYD)
      (d) Liquid Oxygen (LOX)
      (e) High Pressure Gaseous Oxygen (HGOX) >25 psia
      (f) Liquid/Gaseous Hydrogen LH_2,GH_2

1.3.1 RATING CRITERIA AND SYMBOLS

Alpha codes are used to rate the various materials.

1.3.2 FLAMMABILITY (FLAM)

1.3.2.1 GENERAL

Materials tested per NHB 8060.1 Test 1 and 2 are rated for each test environment as follows:

a. A -- Meets Test 1, NHB 8060.1 requirement in the thickness and test condition specified.

b. B -- Material, in thickness specified, failed Test 1, NHB 8060.1 in the specific test atmosphere with a burn length of more than 6 inches but less than 12 inches.

c. C -- Material, in thickness specified, burned totally in Test 1 with flame propagation rate of less than 0.1 in Test 2.

d. U -- Untested

e. X -- Fails criteria of Test 1. Fails to meet criteria for above ratings or has moderate to heavy burn dripping.

f. S -- Special test, see test report.

g. I -- Insufficient data

NOTE: a) Solvents and liquids must pass the Flash and Fire test point above 450 °F (Test 3) to be rated acceptable.

b) The ratings for "A" rated materials in a specific oxygen concentration, thickness and pressure are applicable to the same material in the same thickness or greater at a lower oxygen concentration and/or pressure.

Information Handling Services, 2000

1.3.2.1.1 WIRE AND CABLE

Electrical wire and accessories shall be rated as follows, depending on test results in the test atmosphere during application of current overloads up to or exceeding fusion current of the electrical conductor (Test 4). Electrical wire accessories must also meet the upward flammability criteria of Test 1. Overall ratings are as follows:

a. A -- No ignition (no visible flame) with current overloads up to or exceeding fusion current of conductor and self-extinguishes in less than 3 inches when tested per Test 1.

b. B -- Ignition (visible flame) burns less than 10 seconds, damage to all other wire (excluding current carrying wire) is less than 3 inches total per Test 4 and self-extinguishes in 6 inches or less when tested per Test 1. Class B wire requires an MUA with a configuration analysis/test which will be required before final use in design.

c. C -- Fails Criteria A and B or criteria of Test 1. Fault current analysis, configuration test and MUA required before final use in design is approved. Requires cover/wrapping, etc., to isolate material.

d. U -- Untested

e. I -- Insufficient data

f. X -- Burns completely Test 1 and/or Test 4 and/or burn dripping.

1.3.2.2 TOXICITY/OFFGASSING

Unless otherwise noted, all data was normalized to a 168-hour duration and a volume of 65 cubic meters and compared with MAC Values listed in NHB 8060.1. Materials/assemblies are valid, based on an analysis of specific test results. The acceptability of all hardware in a pressurized module must be analyzed , as specified in NHB 8060.1 to determine acceptability.

Ratings are assigned as follows:

a. K -- Meets MAC (100-lbs) Values without special cure.

b. A -- Meets MAC (10-lb max) Values without special cure.

c. B -- Meets MAC (100-lbs or 10-lbs max listed in NHB 8060.1 with special cure.

d. U -- Untested

e. V -- Meets MAC (5-lbs max) Values (MUA required).

f. X -- MAC Values greater than that specified in NHB 8060.1 for the above quantities (MUA required).

Information Handling Services, 2000

g. S -- Special test, see test report.

h. I --Insufficient data

Material with unidentified trace gases will have all constituents identified treated as one gas (i.e., add up all unidentified trace gas weight). MAC for unidentified trace gases, totaled, must not exceed .1 milligrams/M^3. Cure must be specified in Materials List for "B" rated materials. Evaluation of data has indicated a wide variation in some materials rated "V" or "X". These materials may have individual test data points under same conditions that vary from "K" to "X".

NOTE: A sealed container that meets the following requirement does not require a Toxicity test for internal materials. A unit which has a leak rate of 10^{-4} standard CC/SEC or less of He, with a "partial pressure" differential of 14.7 psia.

1.3.2.3 ODOR

a. A -- Meets ODOR requirements of NHB 8060.1 without special cure.

b. B -- Meets ODOR requirements of NHB 8060.1 with special cure.

c. X -- Fails ODOR requirements.

d. U -- Untested

e. I -- Insufficient data

1.3.2.4 THERMAL VACUUM STABILITY (TVS)

Materials tested per JSC SP-R-0022A are rated as follows:

a. A -- Meets requirements of JSC SP-R-0022A without special cure/bakeout.

b. B -- Meets requirements of JSC SP-R-0022A with additional cure/bakeout.

c. C -- TML (Total Mass Loss) less than 3% (percent) and VCM (Volatile Condensable Mass) less than 1% (percent).

Information Handling Services, 2000

d. U -- Untested

e. X -- TML more than 3 and VCM more than 1.

f. S -- Special test , see test report.

g. I -- Insufficient data

MUA's must be submitted for all materials that are not "A" rated. Materials rated "B" that have been cured to meet the "A" requirements do not require an MUA if the cure data is specified on the materials list. in materials list. Data presented in the average value for the specific tests while Batch to Batch material variation has not been proven. Evaluation of data in MAPTIS from all organizations indicate a variation in TVS results a number of Materials rated "C" or "X" have individuals test under same condition that vary from "A" to "X".

1.3.2.5 STATIC AGE LIFE (AGE)

Materials are rated "A" when their properties do not deteriorate during 10 years of static life at ambient temperatures and humidity. Static life is defined as "shelf life" plus "installed life" and does not include "operational life" or "operation environment". Materials rated "B" shall meet all "A" rating requirements when specific controls are imposed (e.g., stored in a controlled environment, etc.).

1.3.2.6 FLUID SYSTEM COMPATIBILITY - NITROGEN TETROXIDE

a. Materials that contact nitrogen tetroxide (N_2O_4) are rated, "A" if they pass the fluid compatibility test of NHB 8060.1, Test 15. Materials are considered compatible if exposure to fluid for 48 hours at 160 °F does not result in chemical changes such as thickness, flaking, dissolution, etc.

b. X -- Material fails above.

c. U -- Untested

d. I -- Insufficient data

1.3.2.7 FLUID SYSTEM COMPATIBILITY - HYDRAULIC COMPATIBILITY

a. A -- Materials are rated "A" if the fluid and the material do not deteriorate appreciably on long term contact over the temperature range of -65 F to +275 °F, when tested per MIL-P-25732, and Test 15 of NHB 8060.1 and does not cause corrosion of metallic material.

Information Handling Services, 2000

b. X -- Material fails.

c. U -- Untested

d. I -- Insufficient data

1.3.2.8 FLUID SYSTEM COMPATIBILITY - HYDRAZINE

a. A -- Materials are rated "A" if they pass the fluid compatibility test of NHB 8060.1, Test

b. X -- Material Fails

c. U -- Untested

d. I -- Insufficient data

1.3.2.9 COMPATIBILITY WITH LOX/GOX

Materials are rated based on results of test evaluations specified in NHB 8060.1. See 1.3.2.10 and 1.3.2.11.

1.3.2.10 TEST NO. 13 - LIQUID AND GASEOUS OXYGEN (MECHANICAL IMPACT)

All tests for LOX/GOX compatibility shall be done at the maximum use temperature and pressure and minimum use thickness per NHB 8060.1, Test 13.

a. A -- Material meets the mechanical impact requirement at the indicated thickness, pressure and temperature with no reaction in 20 impacts, or one reaction out of 60 impacts, at 368 ft-lbs/in 2, 72 ft-lbs or 10 Kgm, and does not require batch testing.

b. B -- Same as "A" above except material must be batch tested (i.e., each batch must be tested to insure product quality).

c. C -- Material fails at 368 ft-lbs/in ^{2} but passes at some energy level above 102 ft-lbs/in ^{2} at the test pressure and temperature and must be evaluated in its use condition and must be batch tested.

d. X -- Material fails at 102 ft-lbs/in ^{2}.

e. U -- Untested

f. Z -- More than one reaction noted at test level. However, threshold energy must be determined on the actual batch used.

Information Handling Services, 2000

g. S -- Special test, see test report

h. I -- Insufficient data

NOTE: Material Usage Agreements are required for all materials not rated "A". See NHB 8060.1 for "Single Barrier Failure Analysis".

1.3.2.11 TEST 14 - GASEOUS OXYGEN PNEUMATIC IMPACT TEST

All tests for pneumatic sensitivity shall be done per NHB 8060.1 TEST 14 and rated as follows:

a. B -- No reaction in 20 surges at test pressure and thickness indicated.

b. U -- Untested

c. X -- Material fails the pneumatic surge test at pressure indicated.

d. S -- Special test, see test report.

e. I -- Insufficient data

NOTE: Material Usage Agreements are required for ALL materials NOT rated "A" . See NHB 8060.1 for "Single Barrier Failure Analysis".

1.4 STANDARD/COMMERCIAL PARTS

1.4.1 GENERAL

Standard/Commercial Parts are listed in Table 3. Their ratings are based on the criteria defined in this document and on the ratings given in Tables 1 and 2. The list serves as a guide for Standard/Commercial Parts in both the as-designed and as-built configurations. For Standard/Commercial Parts not listed in Table 3, the material ratings from Tables 1 and 2 should be used for the materials specified.

1.4.2 TABLE 3 CONTENT

Table 3 contains the listing of Standard/Commercial Parts by document number (basic part number - dash number to be added for the different sizes, lengths, etc.) and includes for each material used in the part; the assigned material code number (from Table 1 or Table 2), material designation, reference data and general ratings for each of the following:

a. F -- Flammability

Information Handling Services, 2000

b. T -- Toxicity

c. V -- Thermal/Vacuum Stability

d. A -- Static Age Life (for nonmetallics)

e. F -- Fluid Systems Compatibility (See Table 1 and/or Table 2)

f. S -- Stress Corrosion Cracking (for metallics)

g. C -- Corrosion (for metallics)

1.4.3 RATING CODES FOR STANDARD/COMMERCIAL PARTS

The following alpha characters are used in Table 3 for overall evaluation rating of the various materials used for the Standard/Commercial Parts:

a. "A" -- Materials with this rating are acceptable for use in the indicated category and include materials which have been rated "A". Also, this rating may be used for "B" rated materials which have had the necessary controls imposed to meet the "A" rating requirements, (e.g., Aluminum Alloy which has been coated with an approved corrosion protection coating).

b. "X" -- Ratings for the Standard/Commercial Parts (S/C Parts) are dependent upon the rating for each material of the part. If the rating for a material is other than the above "A" rating, the overall rating of the S/C Part is listed as "X". Use of a part with this rating should be discouraged and is not allowed until a justification is submitted and approved. The justification must contain sufficient data to justify this S/C Part selection and to support the specific design application. A Material Usage Agreement (MUA) must be submitted and approved for all S/C Parts which do not have the above "A" rating in the applicable categories.

c. "O" -- This rating is used to indicate that there is no requirement for that particular category.

d. "T" -- This rating is used to indicate that the material rating in Table 1 or Table 2 must be consulted.

1.5 FOREIGN ALLOY/CROSS REFERENCE

Listed in Tables 4 and 5 are Foreign Alloy to U.S. Alloy Cross References for selected aluminum and steel alloys.

Information Handling Services, 2000

1.6 ATOMIC OXYGEN EFFECTS

It has been observed since the early Shuttle flights that a degradation of many materials occur due to atomic oxygen interactions. Generally the effects are as follows:

a. Organic complexes containing carbon, hydrogen, oxygen and nitrogen such as polymeric films show high reactivity and have reaction efficiencies ranging from about 1 to 3 x 10- 24 cm 3 of material per incident atomic oxygen atom. Thus, these material losses are proportional to th atomic oxygen incident on the surface.

b. Fluorinated organics and silicone have relatively good stability.

c. Addition of antioxidants does not seem to significantly affect reaction rates for organics.

d. Paints which usually contain inert fillers have shown evidence of binder erosion with unaffected fillers. Binder erosion is about 10^{-21} milligrams per incident atomic oxygen atom. Optically, paints become diffuse and/or show increases in absorptivity. Some bleaching is evident in yellow urethane paint.

e. Metals such as osmium and silver show severe effects by volatilization and scaling, respectively. Degradation dependency on temperature occurs in silver. Other metals such as copper, nickel, etc., show some effects on a microscopic level. The long term effects on metals are unknown. Diffusion of oxygen into the metals may be a concern.

f. Some protective techniques which show promise include silicone based coatings, fluorinated overcoats, thin metal overcoats and metal oxide overcoats.

g. Spacecraft glow phenomena is suspected to result from the interaction of materials with atomic oxygen. Specific materials questions may be addressed to the cognizant NASA Materials and Processes organization.

1.7 TESTING

Ratings in Table 2 are based on data from the standard testing procedures of NHB 8060.1 and SP-R-0022A. Samples of materials requiring test shall be submitted in amounts specified in Table 6.

1.8 SAFETY

Safe practices shall be assured in accordance with all applicable documents.

Information Handling Services, 2000

1.9 PAYLOAD BAY HARDWARE IN VENTED CONTAINERS

Pallet hardware may be categorized as vented or sealed containers. This hardware may include high voltage or small gas filled cells, special electronics, lamps, etc. The hardware must be evaluated per NHB 8060.1 to assure safety while exposed to the ambient environment before launch and after landing. Evaluation will be at the black-box level. Also, the pallet experiments shall be judged for vacuum compatibility per JSC SP-R-0022A, "Vacuum Stability Requirements of Polymeric Materials for Spacecraft Applications".

NOTE: A sealed unit is defined as a unit which has a leak rate of 1×10^{-4} standard CC/SEC or less of He with a pressure difference of 14.7 psi.

2.0 GROUND SUPPORT EQUIPMENT (GSE)

GSE shall, in no way, adversely effect the flight hardware. That which interfaces with flight hardware, shall be treated as flight hardware. This document also is applicable to GSE used for/in major test and manned test chambers.

3.0 CONTROL OF MATERIALS OTHER THAN "A" RATED

Acceptable materials are those which are rated "A" per paragraph 1.3.2 herein. "B" rated materials as well as all other materials which failed NHB 8060.1, require an MUA or other documentation as specified by the cognizant NASA Center for approval of usage.

4.0 IDENTIFICATION OF MATERIALS

All materials and parts must be identified by specification, material, manufacturer's trade name and manufacturer.

5.0 EXPLANATION OF TERMS

Material Code is used herein for reference as Material Code Directory number, also called Index Number. See paragraph 10.0 for acronyms.

6.0 ADDITIONAL INFORMATION

The information in Tables 1 and 2 is sorted as follows:

a. METALS

(1) Material Code
(2) Designation
(3) Specification

Information Handling Services, 2000

b. NONMETALS

(1) Material Code
(2) Designation
(3) Specification
(4) Manufacturer

c. A listing of constituent gases is contained in the MAPTIS system.

d. Contact C. F. Key, Marshall Space Flight Center, Code EH02, telephone (205) 544-2487 or DR. L. J. LEGER, Johnson Space Center, Code ES5, telephone (713) 483-8913 for additional information or comments.

7.0 HANDBOOK SEARCH HINTS

NOTE: MATERIAL RATINGS ARE LISTED ONLY IN DESIGNATION TABLES.

INFORMATION YOU WILL SUPPLY :
(1) 'MATERIAL CODE' EXAMPLE '06173'
(2) 'MATERIAL MANUFACTURER' EXAMPLE 'LORD CORPORATION'
(3) 'MATERIAL SPECIFICATION' EXAMPLE 'MIL-P-23377'
(4) 'MATERIAL DESIGNATION/USE' EXAMPLE 'COATING CHEMGLAZE Z306'
EXAMPLE 'AL 2024'

USE APPLICABLE TABLE TO LOCATE CORRECT DESIGNATION FROM INFORMATION SUPPLIED.

SEARCH HINTS ARE AS FOLLOW:
(1) HEAT SHRINKABLE TUBING -- SEE 'TUBING'
(2) ADHESIVE -- SEE 'ADHESIVE'
(3) COATING -- SEE 'COATING'
(4) TAPE -- SEE 'TAPE'
(5) RUBBER -- SEE 'RUBBER'
(6) LUBRICANT -- SEE 'LUBE GREASE', 'LUBE OIL', ETC.
(7) PRINTED WIRING BOARD -- SEE 'LAMIN' OR 'LAMINATE'
(8) INSULATION -- SEE 'INSULATION'
(9) MULTI-LAYER INSULATION -- SEE 'MLI'
(10) FABRIC -- SEE 'FABRIC'
(11) THREAD -- SEE 'THREAD' OR 'YARN'
(12) 2024T6 -- SEE 'AL 2024T6'
(13) 304 -- SEE 'CRES 304'

SOME MATERIAL MAY HAVE MORE THAN ONE USAGE CATEGORY SUCH AS: 'SEALANTS', 'ADHESIVE', 'RUBBER'. ALL OF THESE CATEGORIES SHOULD BE SEARCHED BEFORE DETERMINING THE MATERIAL IS NOT IN HANDBOOK.

SEE TABLES 1C AND 2C FOR 'DELETED' MATERIAL CODES AND REPLACEMENTS.

SPECIFICATIONS AND MANUFACTURERS ARE NOT DUPLICATED FOR MULTIPLE USES. THEY ARE ONLY PRINTED FOR FIRST (1st) DESIGNATION.

Information Handling Services, 2000

8.0 ADDITION OF MATERIALS/STANDARD COMMERCIAL PARTS TO SELECTION LIST

When materials and/or standard commercial parts are used that are not listed herein, the cognizant person, listed in 7.0C must be contacted to determine what information and/or test data is required prior to assigning a material code. In addition, the following data input sheets must be submitted:

a. Selection List Data Sheets (Figures 1 or 2) shall be used to request that new materials be palced into the Materials Selection List.

b. The Standard/Commercial Parts Data Input Sheet (Figure 3) shall be used to request that a standard commercial part be added to the Standard/Commercial Parts Report.

9.0 ADDENDA/UPDATES

The tables attached herein will be updated quarterly. Please submit written requests for updates/addendums to C. F. Key at the address specified in paragraph 7.0.
